The System of Rice Intensification (SRI) and Questions of Gender and Labor

Regina Hansda

Thursday, March 22, 2018

4:00 - 5:00 PM

100 Mann Library

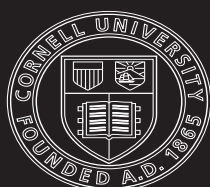

Regina Hansda is a Research Fellow at the Centre for Rural Economy, Newcastle University, UK. She has more than seven years of work experience in the development sector in India working on issues of community-based natural resource management, rural livelihoods, climate adaptations and traditional knowledge systems. She did her PhD from University of Cambridge, looking at the gendered implications of the System of Rice Intensification (SRI) in Bihar, in Eastern India. Her broad research interests are on food politics, feminist methodologies and epistemologies, environment, development and sustainability issues.

In this seminar, Hansda examines the interplay among gender, labour, and technology within the SRI to understand how in situations of agrarian transition, technology affects and influences social dynamics.
